Exploring Real-World Enterprise Use Cases of n8n

Seguros Bolívar – n8n Case Study

1. What problem/use case did they have?

- Legacy insurance system was over 20 years old.
- Medical authorization involved significant manual work.
- Doctors and nurses had to review medical requests and verify insurance coverage.
- Authorization could take 3–4 weeks.

2. Where and why did they implement n8n?

- Adopted n8n Enterprise in early 2025.
- Implemented it as an automation layer around their existing legacy system.
- Main objectives:
    - Automate repetitive processes.
    - Integrate APIs, databases and AI services.
    - Reduce dependency on legacy application modifications.
    - Enable employees to build automation workflows.

3. How was the workflow implemented?

Simplified workflow:

1. Receive medical request (PDF/image).
2. Use Gemini AI to interpret the document.
3. Retrieve patient and insurance policy information.
4. Verify coverage, exclusions and limits.

5. Apply business rules.
6. Generate the authorization decision.

Technologies: n8n, Gemini AI, internal APIs and databases.

4. How did n8n help in real-world scenarios?

Reported results

- Medical authorization reduced from 3–4 weeks to minutes.
- More than 300 active workflows.
- Approximately 3,000 employees enabled to use n8n.
- Reduced manual work and operational costs.
- Doctors and nurses could focus more on patient care.
